

## Models 535B/MS & 535T/MS™ Single Channel Shelf-Mount Detectors with Optional Timers

The Model 535 vehicle detectors from Peek Traffic Corporation offer many high performance features suitable for applications requiring superior detector performance. The 535 series offers high sensitivity, four frequency selections and loop fault indication that discriminate between an open loop, a shorted loop and excessive inductance changes.

An RS232 communications option is available to monitor detector operation and loop performance locally or from a remote location. One serial communications card will address up to sixteen detectors thus allowing remote observation of an entire intersection via telemetry.

### Features

- High sensitivity to 0.01%
- Sensitivity boost for small or high vehicles
- Fifteen levels of sensitivity per channel
- Four frequency selections per channel
- High cross-talk and noise immunity
- Fast response times with consistent operate and release delay
- Present and historical fault indication
- Consistent presence time
